Added value of regrooving Michelin tyres on drive axle

Company AUTOTRANSPORT s.r.o. was founded in 2006, when it was transformed from company Martin Marinica to company AUTOTRANSPORT, s.r.o., therefore first steps of the company are dated in year 1992. Our company offers high quality of transport services thanks to our long year experience. We are part of group of transport companies in Slovakia called ČESMAD Slovakia.

We operate modern fleet of vehicles. At the moment we have at disposal 45 sets, tractor units brands VOLVO, MERCEDES, DAF and articulated trailers brands KRONE a SCHMITZ. We understand, that successful company needs to use resources efectivly. Very important part of cost management is tyre care. Michelin tyres which we specify for original equipment, and are equipped on all of our tractor units, are giving us potential for cost cuts from the point of view of very good milleage performance, good regrooving rate, and good rolling resistance/fuel consumption. We are able to prove our experience with providing the facts.

We have a result of milleage performance on driven axle of tractor unit MB Actros MP3, number plate PO167EP on the tyres Michelin XDA2+ENERGY 295/60R22,5 of 260 900 km until regrooving point. By regrooving we gained additional 56 017 km by which we increased milleage performance by 21,27%. There was fuel consumption 28,8 l/100km during the period of time when vehicle was driving on regrooved tyres. During the same time period before regrooving there was fuel consumption 30,5 l/100km. Therefore by driving regrooved tyres there was save of 5,57% in fuel consumption.

Thanks to usage of Michelin tyres in our fleet and thanks to tyre management we are able to lower running costs of vehicles. We are confident to say, that in the times of cost cutting are Michelin tyres for us, for our type of transport the best and the cheapest solution.
